9. Create a recursive MySQL computing the factorial of a given number using high level programing Extension with Function. Create a simple **procedure** to get all the records from the table 'Employee' and list out the name, department, salary where salary > 20000 in the Table.

```
mysql> DELIMITER $$
mysql> CREATE PROCEDURE get_high_paid_employees()
    -> BEGIN
    ->      SELECT name, department, salary
    ->      FROM Employee
    ->      WHERE salary > 20000;
    -> END$$
Query OK, 0 rows affected (0.28 sec)

mysql> DELIMITER ;
mysql> CALL get_high_paid_employees();
```
